Mobile “Add on” Flexo pump unit for universal applications

DgpS has developed a multipurpose pump unit to feed UV and waterbased flexo inks to a flexo chamber of a flexo unit or flexo insert.

The unit is equipped with the latest generation Watson Marlow industrial peristaltic pumps and has a separate control box. The unit has Inox “easy cleaning” stainless steel covers and is mounted on a trolley. It also contains adjustable pre heating functionality to secure the right ink viscosity.

Because there is no direct contact between liquid and pump, cleaning and change over of ink / varnish is surprisingly quick and easy. The unit has no valves or seals to leak, corrode or clog and is very reliable.

- **High quality and reliable, no wear and tear parts.**
- **Compact and easy to move**
- **High accuracy speed adjustment and precise dosing**
- **Easy cleaning**
- **Short “change over time”**
- **Pre heating for varnish applications.**

- **High value for money.**
