

DGpS roller exchange and printing unit inspection program

DgpS executes de renewal of your compounded rollers on a regular base and combines this with a **free inspection** of your printing units.

Based on a mutual agreed planning, we come by with a new compounded **roller set**. During our fist visit we will exchange the rollers and bearings of the first printing unit. We will take the old rollers with us to let them be recompounded. This "new recompounded set" will then be used during our second visit to exchange the rollers of the second unit. This will be repeated until all units are done. We will take care of the recompounding with the **compound quality of your choice** and eventual the supplier of your choice.

During the visit we will **fully inspect** the printing unit and you will obtain a full inspection report and maintenance advice.

The exchange program will be tailor made to your wishes.

The cost for this is **very competitive**, partly depending on of the location of your production plant. The cost are fixed per unit and includes cost for recompounding, travel, lodging and labour costs. For an exchanche during the weekens a surcharge will be charged. We would be pleased to quote such a program, tailored to your specific needs.

- **Stabile and consistent quality assurance of your printing jobs.**
- **Minimalization of downtime.**
- **No concerns with regards to bad rollers and roller maintenance.**
- **A specialist at your machine on a regular base.**
- **Regular, skilled and thorough inspection of your printing units.**
- **An excellent preventive maintenance program on your printing units.**
- **No resource requirements anymore from your own people.**
- **No investment in an additional rollerset.**

The roller set of the exchange program consist of 7 compounded rollers (B, D1, D3, E2, E3, E1 en G) according to the picture. The rollers are being delivered in a special crate which is also used for sending the "old" set back.
