Modification; sheeter air nozzle

DgpS can supply a modification kit to improve the transport of thin paper stock on the sheeter belt of VSOP 520 and Vision sheeters.

With this modification kit the sheeting speed for thin and light material is improved because the paper will not fall inbetween the two delivery belts.

By modifying the sheeter with an air nozzle system with two small pipes under the exit, an air flow is created that prevents the sheets from falling down.

The kit can be mounted on the sheeter in app 2 hours.

- **Reduces sheeting sentivity for light paper.**
- **Reduces unplanned machine stops due to sheeting problems.**
- **Less operator care needed by sheeter adjustment.**
- **Increased reliability and robustness of your sheeting process.**
- **Increased production speed of the press.**
