## Cover prevents brake from oil and grease; modification VSOP

DGpS can take care of modifying your VSOP 520 with an special designed cover.

The existing system on the VSOP 520 allows for oil and grease spillage on spindle motors. Oil and grease on these motors will result in a slippery brake that can be recognized by a “clicking” sound during operation, eventually followed by a machine stop.

The modification contains of a cover designed to prevent oil and grease falling down on the motors.

With this modification the risk for a machine stop and subsequental helpdesk support is eliminated.

- **Prevents unplanned machine stops.**
- **Reduces need for external call in support.**
- **Less cleaning time needed**
