Modification; reinforced distribution rollers D1, D2 and D3

DgpS can supply reinforced D1,D2 and D3 distribution rollers for VSOP 520 and 850.

The bearings of the distribution roller are subject to heavy wear and tear. The reinforced roller is a full redesign as a solution to the relative short life time of the old roller and bearings.

Instead of bearings on the shaft ends this roller has larger bearings inside the roller. Thus taking away the load on the shaft ends.

The new roller is a rigid, durable and proven solution which can handel far more load.

The modified roller is competible with the old roller and requires no changes on the the printing tower itself.

- **Improved life time of rollers.**
- **Easy exchangeable with your old roller. No further modifications needed.**
- **More durable and reliable printing process.**
- **Less repair and downtime thus increased productivity of your printing process**
